People Health Solutions

Project Overview

People Health Solutions is a trusted healthcare e-commerce and service platform that connects customers with verified distributors, experienced retailers, diagnostic laboratories, hospitals, and emergency-service providers.

Unlike ordinary e-commerce platforms that focus mainly on profit, People Health Solutions focuses on **patient care, trust, affordability, accessibility, and long-term service**. The platform combines the reliability of local medical retailers with the convenience of online ordering.

Key Services

- **Online medicine ordering** through trusted and verified retailers.
- **Distributor and retailer network** for better product availability and competitive prices.
- **Same-day medicine exchange support:** If a doctor changes a patient's medicine after a bulk purchase, eligible unused and properly stored medicines can be exchanged for the required medicine through the original trusted retailer, subject to pharmacist verification and applicable regulations.
- **Affordable healthcare:** Discounts on medicines, laboratory tests, X-rays, MRI scans, and CT scans.
- **Verified diagnostic services** through reliable partner laboratories.
- **Hospital partnerships** that provide special discounts, with eligible charges paid directly to the hospital.
- **Free ambulance service** for patients who require emergency transportation.
- **Trusted local service:** Customers can continue receiving support from retailers who have served their communities for many years.
- **Customer support:** Assistance with prescriptions, orders, exchanges, delivery, and healthcare-service bookings.

How It Works

1. The customer uploads a valid prescription or selects an eligible over-the-counter product.
2. The platform verifies the prescription and assigns the order to a licensed partner pharmacy or retailer.
3. The medicine is checked by a registered pharmacist and delivered to the customer.
4. If the patient's prescription changes, the retailer verifies the medicine's condition, batch, expiry date, storage history, and purchase record before processing an exchange.
5. Customers can book discounted diagnostic tests, hospital services, and ambulance support through the platform.

Prescription medicines should be supplied only through properly licensed pharmacies and under the supervision of registered pharmacists. Prescription requirements and applicable drug-sale regulations must be followed, particularly for Schedule H, H1, and X medicines.[1][2]

Main Objective

The objective of People Health Solutions is to create a **patient-first healthcare ecosystem** that provides:

- Reliable access to genuine medicines.
- Fair pricing and meaningful discounts.
- Convenient healthcare bookings.
- Support from trusted retailers.
- Safe and responsible medicine-exchange assistance.
- Emergency transportation support.
- Better coordination between customers, pharmacies, distributors, laboratories, and hospitals.

Unique Value Proposition

“Trusted healthcare, connected to your community.”

People Health Solutions is different because it combines the convenience of e-commerce with the personal service and trust of established local medical retailers. The platform does not focus only on selling products; it helps patients receive continuous support throughout their healthcare journey.

Important Operational Requirements

To operate safely and legally, the project should include:

- Verification of pharmacy and distributor licences.
- Registered-pharmacist supervision.
- Prescription validation and secure recordkeeping.
- No exchange of medicines that are opened, damaged, expired, temperature-sensitive, or improperly stored.
- Clear terms for medicine returns and exchanges.
- Secure handling of patient health information.
- Agreements with hospitals, laboratories, ambulance providers, distributors, and retailers.
- Transparent pricing, delivery charges, discounts, and refund policies.
- A process for complaints, adverse medicine events, and emergency escalation.

Final Project Description

People Health Solutions is a patient-centric healthcare e-commerce platform that connects customers with trusted retailers, licensed pharmacies, distributors, diagnostic laboratories, hospitals, and ambulance providers. It offers convenient medicine delivery, responsible medicine-exchange assistance when prescriptions change, affordable diagnostic tests, hospital discounts, and free ambulance support. By combining digital convenience with the experience and trust of local healthcare retailers, People Health Solutions aims to deliver affordable, reliable, and service-oriented healthcare to every customer.

People Health Solutions: Funding Financial Model

Based on the figures provided, People Health Solutions generated **₹ 4.60 crore in total annual business volume** last year and an estimated **₹ 47.60 lakh gross profit**, giving a blended gross margin of approximately **10.35%**.

For fundraising, separate **business volume/GTV** from **company revenue** and **gross profit**. Investors normally expect revenue by business line, gross margin, operating expenses, EBITDA/net profit, and the assumptions behind the projections.[1]

Last-Year Business Summary

Business segment	Annual business volume	Stated gross margin	Estimated gross profit
Medicines	₹ 3,00,00,000	8%	₹ 24,00,000
Laboratory tests	₹ 30,00,000	12%	₹ 3,60,000
CT, MRI and X-rays	₹ 30,00,000	15%	₹ 4,50,000
Hospital services	₹ 1,00,00,000	10%	₹ 10,00,000
Total	**₹ 4,60,00,000**	**10.35% blended**	**₹ 42,10,000**

Calculation

$$\text{Gross Profit} = \text{Business Volume} \times \text{Profit Margin}$$

$$\text{Blended Margin} = \frac{₹\ 42{,}10{,}000}{₹\ 4{,}60{,}00{,}000} \times 100 = 9.15\%$$

There is a difference between the stated segment margins and the later discount-spread calculations. Therefore, the fundraising document should clearly label the numbers as either **actual accounting margins** or **expected commercial margins**.

Discount-Spread Calculation's

The following table uses the discount figures supplied in your second explanation. It assumes that the listed customer discount is deducted from the supplier's maximum discount or commercial benefit.

Segment	Supplier/distributor benefit available	Customer discount	Service/retained spread	Business volume	Estimated retained amount
Medicines	26%	18%–20%	6%–8%	₹ 3,00,00,000	₹ 18,00,000–₹ 24,00,000
Laboratory tests	45%–60%	40% flat	5%–20%	₹ 30,00,000	₹ 1,50,000–₹ 6,00,000
CT, MRI and X-rays	50%	30% flat	20%	₹ 30,00,000	₹ 6,00,000
Hospital services	30%	20% flat	10%	₹ 1,00,00,000	₹ 10,00,000
Total	—	—	—	**₹ 4,60,00,000**	**₹ 35,50,000–₹ 46,00,000**

Important medicine calculation

For medicines:

- At an 18% customer discount:

$$26\% - 18\% = 8\%$$
$$₹\ 3{,}00{,}00{,}000 \times 8\% = ₹\ 24{,}00{,}000$$

- At a 20% customer discount:

$$26\% - 20\% = 6\%$$
$$₹\ 3{,}00{,}00{,}000 \times 6\% = ₹\ 18{,}00{,}000$$

If **1% is separately charged as a service fee**, do not subtract it from the retained margin unless it is already included in the 18%–20% discount calculation.

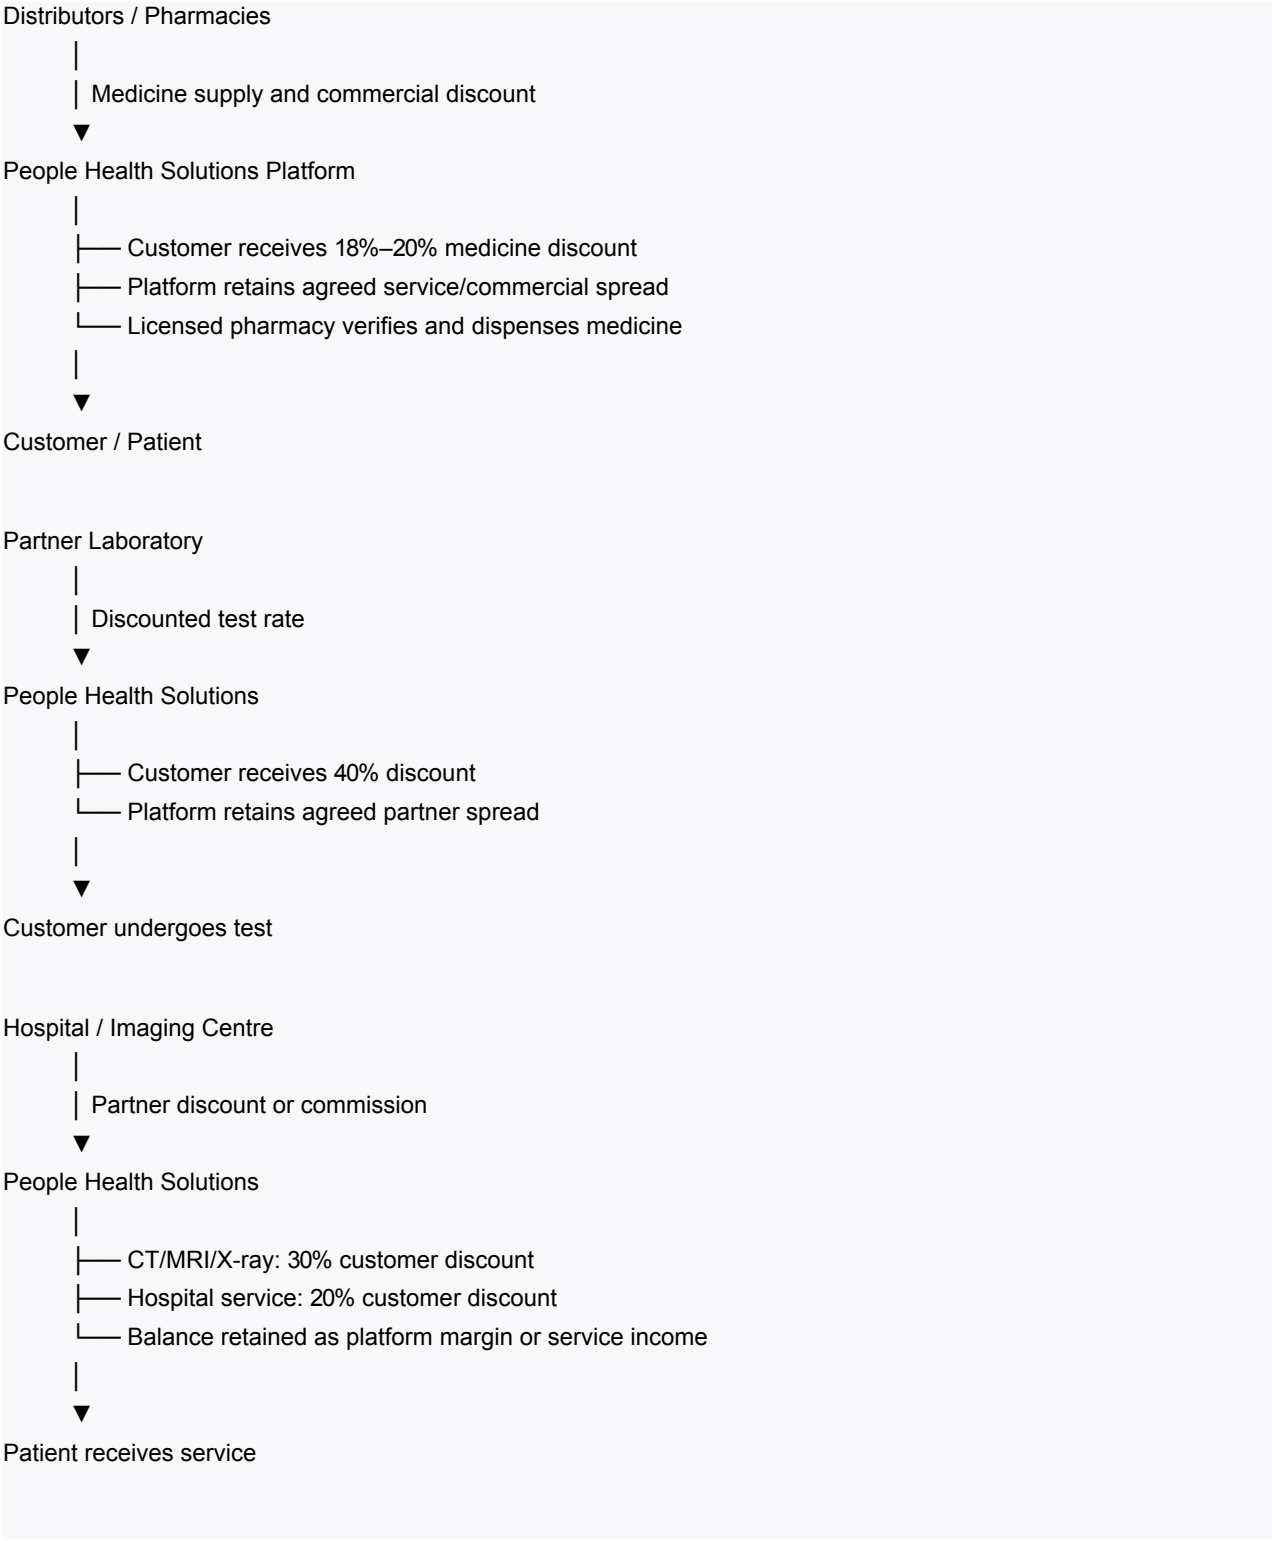

3. Recommended Investor Presentation

For investor clarity, present the business in two layers:

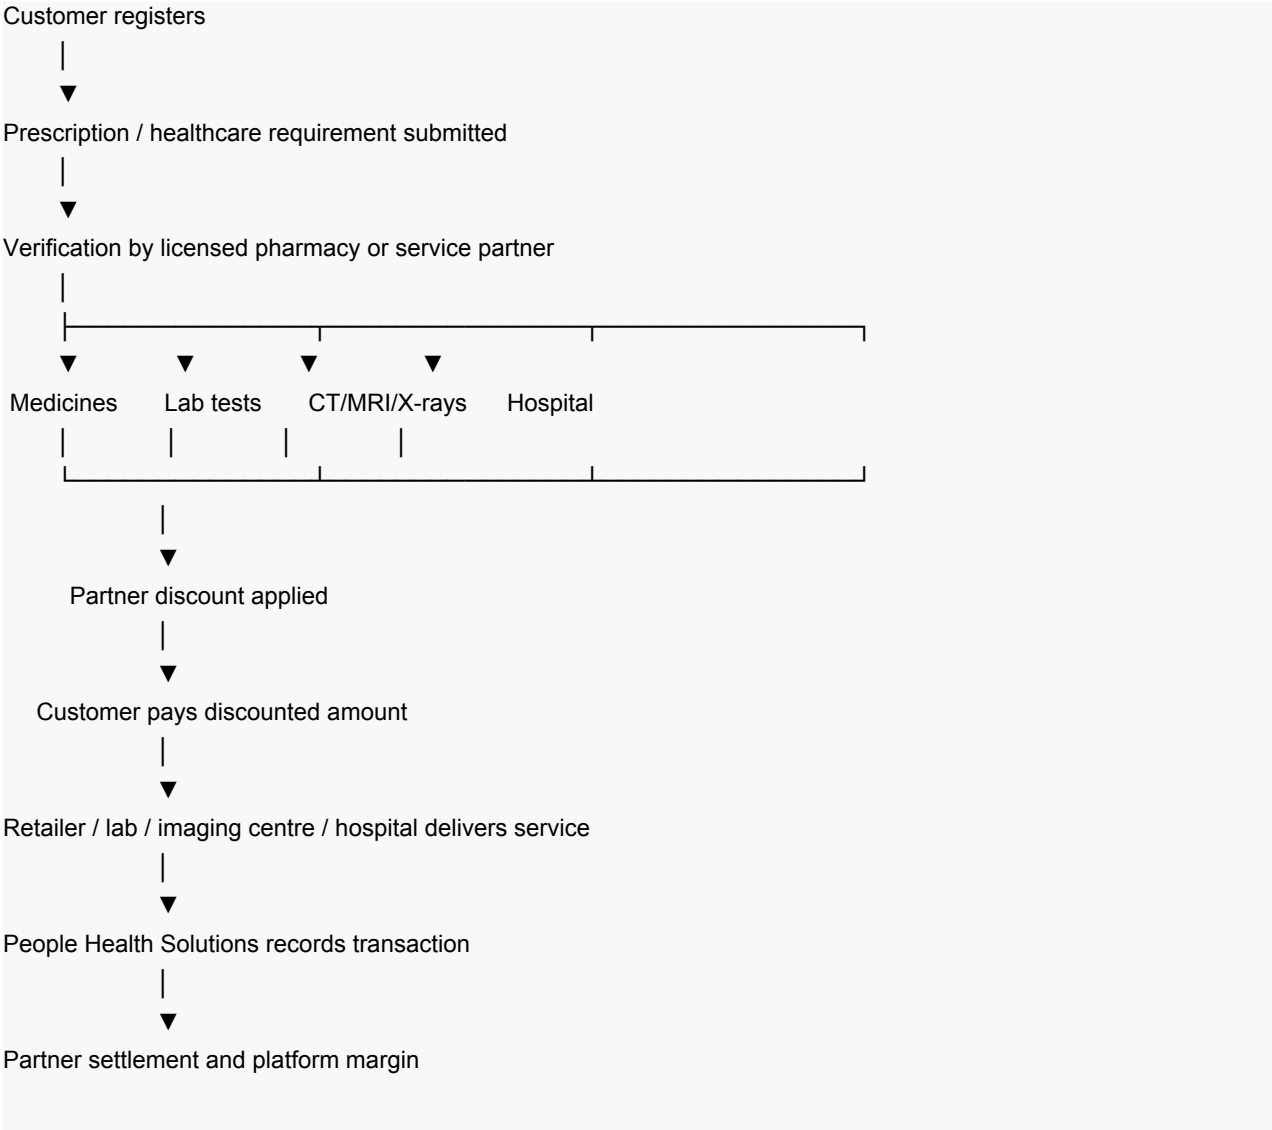

Financial measure	Meaning	Last-year figure
Gross business volume	Total value of medicines and healthcare services facilitated	₹ 4.60 crore
Platform/commercial revenue	Amount retained or earned by the company	₹ 35.50–₹ 46.00 lakh, based on discount spread
Accounting gross profit	Profit after direct procurement/service cost	₹ 42.10 lakh, based on stated segment margins
Blended business margin	Gross profit divided by total business volume	9.15% using stated margins
Operating profit	Gross profit less salaries, technology, marketing, logistics, rent and administration	To be calculated from actual expenses
Net profit	Operating profit less interest, tax and other costs	To be confirmed from audited accounts

Do not present ₹ 4.60 crore as company revenue if it represents the total value of transactions processed for distributors, retailers, laboratories, hospitals, and customers. It should be described as **GMV, transaction value, or gross business volume**, depending on your accounting treatment.

4. Money Flow

Distributors / Pharmacies
Medicine supply and commercial discount
People Health Solutions Platform
Customer receives 18%–20% medicine discount
Platform retains agreed service/commercial spread
Licensed pharmacy verifies and dispenses medicine
Customer / Patient
Partner Laboratory
Discounted test rate
People Health Solutions
Customer receives 40% discount
Platform retains agreed partner spread
Customer undergoes test
Hospital / Imaging Centre
Partner discount or commission
People Health Solutions
CT/MRI/X-ray: 30% customer discount
Hospital service: 20% customer discount
Balance retained as platform margin or service income
Patient receives service

5. Overall Business Flowchart

6. Funding-Deck Financial Slide

Traction achieved

- **₹ 4.60 crore** annual healthcare business volume.
- **₹ 3 crore** medicine transactions.
- **₹ 30 lakh** laboratory-test transactions.
- **₹ 30 lakh** CT, MRI and X-ray transactions.
- **₹ 1 crore** hospital-related transactions.
- Network of distributors, trusted retailers, laboratories, imaging centres, and hospitals.
- Patient-focused model based on discounts, service, and local trust.

Revenue opportunity

The model retains value from:

- Medicine procurement and service spreads.
- Laboratory partner margins.
- Imaging-centre discounts.
- Hospital partnership commissions.
- Delivery, subscription, or membership services, if introduced.
- Referral and healthcare coordination services, where legally permitted.

7. Recommended Projection Format

Before presenting future projections, calculate actual expenses and use the following structure:

Particular	Year 1 actual	Year 2 projected	Year 3 projected
Gross business volume	₹ 4.60 crore	[insert]	[insert]
Platform revenue	[insert]	[insert]	[insert]
Direct service costs	[insert]	[insert]	[insert]
Gross profit	[insert]	[insert]	[insert]
Employee expenses	[insert]	[insert]	[insert]
Technology and app costs	[insert]	[insert]	[insert]
Marketing and customer acquisition	[insert]	[insert]	[insert]
Delivery and ambulance operations	[insert]	[insert]	[insert]
Administrative expenses	[insert]	[insert]	[insert]
EBITDA	[insert]	[insert]	[insert]
Funding requirement	—	[insert]	—

A credible fundraising model should include a three-year projection, revenue assumptions, cost structure, cash-flow forecast, funding requirement, and intended use of funds.[2][1]

8. Suggested Use of Funds

The funding allocation can be presented as follows, after deciding the actual amount to raise:

Use of funds	Suggested allocation
Technology platform and mobile application	25%
Retailer, distributor and hospital onboarding	20%
Marketing and customer acquisition	20%
Operations, delivery and customer support	15%
Ambulance and emergency-service partnerships	10%
Compliance, security and working capital	10%
Total	**100%**

Compliance Note

Medicine transactions must be routed through licensed pharmacy partners and registered pharmacists. Prescription medicines should be supplied only against valid prescriptions, with appropriate records and controls; this is especially important for Schedule H, H1, and X medicines.[3][4]

Investor-ready summary

People Health Solutions processed ₹ 4.60 crore of healthcare business volume in the previous year, comprising ₹ 3 crore in medicines, ₹ 30 lakh in laboratory services, ₹ 30 lakh in CT/MRI/X-ray services, and ₹ 1 crore in hospital services. The platform creates value by negotiating partner discounts, passing substantial savings to customers, and retaining an agreed service and commercial margin. Based on the stated segment margins, estimated gross profit is ₹ 42.10 lakh; based on the discount-spread model, estimated retained income is approximately ₹ 35.50 lakh to ₹ 46 lakh. The company's competitive advantage is its trusted network of distributors, experienced retailers, diagnostic centres, hospitals, and patient-oriented services.
